Timothy scherr

Senior Software Engineer

scherrtimothy@outlook.com https://www.linkedin.com/in/timothy-scherr-848b1336a Hawkins, Texas

SUMMARY

Senior Full-Stack Engineer with expertise in building scalable, enterprise-grade applications using Java, C#, Python, JavaScript, and PHP. Experienced in backend development with ASP.NET, Django, and Spring Boot, and in designing secure, high-performance RESTful APIs and microservices architectures. Strong frontend experience with React and Next.js, delivering responsive, user-focused interfaces.

Proficient in cloud-native development on Amazon Web Services (EC2, S3, RDS, DynamoDB, Lambda), along with containerization and CI/CD using Docker and Jenkins. Skilled in database design and optimization with PostgreSQL, MySQL, MongoDB, Microsoft SQL Server, and SSAS. Adept at system architecture, performance tuning, security hardening, and resolving complex production issues, with a strong focus on scalability, reliability, and long-term maintainability.

EXPERIENCE

Senior Software Engineer

MCSG Technologies

02/2023 - 01/2026 Oklahoma City, United States

- Designed, developed, and maintained end-to-end web applications using C#, ASP.NET, Python, JavaScript, and PHP, delivering scalable and high-performance systems. Built robust backend services with Django and Spring Boot, emphasizing clean architecture, secure API design, and long-term maintainability.
- Implemented data-driven solutions using MySQL, MongoDB, and SQLite, including schema design, query optimization, and ensuring data integrity under real-world workloads. Collaborated closely with QA and product teams, integrating automated testing (Jest) and CI pipelines to improve release quality and development velocity.
- Designed and managed cloud-based deployments on AWS, utilizing services such as EC2, S3, RDS, and DynamoDB to build scalable, reliable infrastructure. Streamlined development workflows using Git, Jenkins, and Docker, enabling repeatable builds, automated releases, and efficient team collaboration through Jira.

Senior Software Engineer

BlockWave

04/2018 - 11/2022 Texas City, United States

- Led the design and development of scalable full-stack applications across multiple domains using JavaScript, Python, C#, and PHP, delivering production-ready systems with high performance and reliability. Architected backend services with Django, Flask, ASP.NET, and Spring Boot, focusing on clean architecture, resilient APIs, and maintainable systems.
- Built and deployed cloud-native systems on AWS, leveraging services such as EC2, S3, RDS, DynamoDB, Lambda, and API Gateway to design highly scalable, fault-tolerant architectures. Implemented infrastructure using Docker and containerized workloads, ensuring efficient deployments and system consistency across environments.
- Developed modern frontends using React and Next.js, collaborating closely with product and design teams to deliver intuitive, high-performance user experiences. Designed secure APIs with robust authentication, data validation, and reliable communication between distributed services.
- Optimized data layers using PostgreSQL and MongoDB, designing efficient schemas and improving query performance under real-world load. Diagnosed and resolved critical production issues, modernized legacy systems, and drove architectural improvements to enhance scalability and system performance.

Senior FullStack Developer

DataForge

03/2016 - 12/2018 Texas City, United States

- As a senior full-stack engineer, I designed, built, and maintained enterprise-grade web applications and backend services using Java, C#, Python, JavaScript, PHP, and ASP.NET. I led the development of RESTful APIs and integration layers that supported complex business workflows and high-traffic production systems.
- On the frontend, I developed modern, high-performance user interfaces using React and Next.js, translating complex product requirements into intuitive, responsive experiences. I focused on component-driven architecture, state management, and performance optimization to ensure fast, scalable, and user-friendly applications across devices.
- My responsibilities included performance tuning, security hardening, and resolving critical production issues, often involving deep debugging across application, database, and infrastructure layers.
  Beyond hands-on development, I contributed to system architecture decisions, modernized legacy codebases, and collaborated closely with product, QA, and operations teams to deliver stable, scalable solutions. I was frequently relied on to handle complex technical challenges, mentor other engineers, and ensure long-term maintainability of core systems.

EXPERIENCE

Software Developer

Metrotech

10/2010 - 11/2014 Texas City, United States

- Built full-stack applications for internal tools, automation systems, and customer-facing platforms.
- Developed solutions using JavaScript, Java, PHP, and early cloud integrations.
- Collaborated with product teams to enhance user experience, performance, and system reliability.
- Supported code reviews, testing procedures, and long-term system maintenance efforts.

SKILLS

Frontend

React | Next.js | Vue.js | Angular | TypeScript | JavaScript | Tailwind CSS

Backend

C# | ASP.NET | Java | Spring Boot | Node.js | Express | NestJS | Python | FastAPI | Django | Flask | REST | AWS | PostgreSQL | MySQL | MongoDB | DynamoDB | Redis | Ruby | Rails | Microservices | OAuth2/JWT

Other

GraphQL | GCP | Firebase | Docker | Nginx | Git | Jest | Jenkins | Github | Linux | Jira

EDUCATION

MS of Computer Science

Texas Tech University

09/2014 - 05/2016

BS of Computer Science

Texas Tech University

09/2002 - 06/2006

LANGUAGES

English
Native
